“The Integration Platform As A Service Landscape, Q2 2023” includes SEEBURGER as an iPaaS vendor

Independent Research Firm Recognizes SEEBURGER’s Integration Platform as a Service in New Report

04/17/2023 – Bretten, Germany – SEEBURGER, the global leader in business integration solutions, is pleased to be named in analyst firm Forrester’s The Integration Platform As A Service Landscape, Q2 2023 report. The report includes 32 iPaaS vendors and an overview of each vendor’s solutions based on market maturity and functionality by use case.

In the report, Forrester defines iPaaS as: “A vendor-managed cloud service that simplifies and reduces the cost of developing and maintaining interfaces via flow-based orchestration, a library of collectors, and data transformation.”

According to the report, “Developers use iPaaS to build integrations via visual configurations, writing little to no code. iPaaS decouples services from transport protocols and data schemas and can abstract technical services into a service coherent to the business rather than to the underlying applications and vendor software. Such business services then become the foundation for business agility and automation.”

The report notes that the SEEBURGER type of offering is a general-purpose platform that can be used to build any domain application with extended use cases of IoT integration and OEM-embedded iPaaS.

“The SEEBURGER Integration Platform as a Service, powered by the SEEBURGER Business Integration Suite (BIS) Platform, empowers any type of user to implement, manage and support integrations between applications, people and processes in any cloud.” said Ulf Persson, SVP Strategic Product Management and Analyst Relations. “We are excited to offer an iPaaS that delivers a unified experience to our customers and business partners, to help simplify their complex integration challenges with secure connections, process automation and agile innovation.”
